Theoretical Sedimentology: Carbonates

Blake Dyer, Princeton University

02 June 2015

Today I managed to get python - goal working with DEM files from the bahamas. the GMRT dataset is pretty good around Andros island, low resolution to the north. I might be able to find another DEM and patch that, not sure. For now, I will continue with developing some python scripts to work with the DEM data and geopandas shapefiles of facies maps for the region. then, i will start working on developing the walkers for generating transition matrices. take a look at [harris2015] for the water energy information. also, add some figures from today
